READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.
You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.
Fig. 1.1 is a photomicrograph of a leaf of the tea plant, *Camellia sinensis*.

(a) Name A to E.

A ...........................................................................................................................................
B ...........................................................................................................................................
C ...........................................................................................................................................
D ...........................................................................................................................................
E ...........................................................................................................................................[5]
(b) Fig. 1.2 shows a cell from region B of the leaf shown in Fig. 1.1.

![Diagram of a cell with labeled parts](image)

Fig. 1.2

Use the letters from Fig. 1.2 to complete Table 1.1.

Write one letter only in each box to identify the function. You may use each letter once, more than once or not at all.

<table>
<thead>
<tr>
<th>function</th>

(c) The enzyme catalase is found in lettuce leaves.

A student investigated the activity of this enzyme by grinding some lettuce leaves and adding them to a solution of hydrogen peroxide. The volume of oxygen produced was measured until the reaction stopped.

The student's results are shown in Fig. 1.3.

![Graph showing the relationship between time (s) and volume of oxygen collected (cm³).]

**Fig. 1.3**

(i) Describe the results shown in Fig. 1.3. You will gain credit if you use the data in your answer.

State the substance or substances in Table 2.1 which:

(i) has molecules which are too large to be filtered;
.......................................................................................................................................

(ii) has molecules which are small enough to be filtered but is completely reabsorbed from the fluid in the kidney tubule;
..........................................................................................................................................

(iii) increases in concentration as fluid moves along the kidney tubule.
1  ........................................................................................................................................
2  ....................................................................................................................................

(c) State three structures through which the fluid from region 4 passes as it leaves the body.
1  ................................................................................................................................................
2  ................................................................................................................................................
3  .............................................................................................................................................

(d) One role of the kidney is to maintain the concentration of the blood plasma.

Name the process of maintaining constant conditions within the body.
...............................................................................................................................................

[Total: 10]
Sewage treatment works use bacteria to digest the waste matter. Waste matter contains complex organic compounds, such as starch, cellulose, protein and fat.

Fig. 3.1 shows a diagram of a sewage works with an aerobic digestion tank.

The sewage works discharges clean water into a river. Downstream from the sewage works, water is removed to be used as drinking water for a nearby village.
(a) Explain the roles of bacteria in the aerobic digestion tank shown in Fig. 3.1.

5 Fig. 5.1 is a diagram of the human immunodeficiency virus (HIV).

(a) (i) Name the parts of the virus labelled X and Y.

X ........................................................................................................................................

Y ........................................................................................................................................[2]

(ii) State three ways in which the structure of bacteria differs from the structure of viruses.

1 ........................................................................................................................................

2 ........................................................................................................................................

3 ........................................................................................................................................[3]
Question 5 continues on page 16.
(b) Sub-Saharan Africa has the highest proportion of the population living with HIV in the world. The World Health Organization estimates both the total number of people who live with HIV and the total number of people that are newly infected each year.

Fig. 5.2 shows the estimated numbers for sub-Saharan Africa between 1990 and 2010.
(i) Summarise the changes between 1990 and 2009 in the number of people living with HIV and the number of people newly infected with HIV.

number of people living with HIV .................................................................
...................................................................................................................
...................................................................................................................
...................................................................................................................

number of people newly infected with HIV ..............................................
...................................................................................................................
...................................................................................................................
...................................................................................................................
...................................................................................................................[4]

(ii) Suggest why in 2010 the number of people living with HIV increased but the number of newly infected people decreased.
...................................................................................................................
...................................................................................................................
...................................................................................................................
...................................................................................................................
...................................................................................................................[2]

(iii) Describe three ways in which HIV is transmitted from infected to uninfected people.
1 ......................................................................................................................
......................................................................................................................

2 ......................................................................................................................
......................................................................................................................

3 ......................................................................................................................
......................................................................................................................[3]
(iv) Describe the effects of HIV on the immune system.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................

...........................................................................................................................................
...........................................................................................................................................[3]

[Total: 17]
Question 6 begins on page 20.
Some pollutants are not broken down easily and remain in the environment for a long time. These are described as persistent pollutants.

PCBs are a waste material from the manufacturing of electrical insulation. PCBs are one of the most persistent pollutants in the environment.

Between 1947 and 1976, factories dumped large quantities of PCBs into the Hudson River in the USA. Studies measured the concentrations of PCBs in the tissues of organisms in a food chain in the sea near the Hudson River, as shown in Fig. 6.1.

![Fig. 6.1](image-url)
(a) (i) Describe the results shown in Fig. 6.1.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
................................................................................................................................................[3]

(ii) Suggest an explanation for the different concentrations of PCBs in the organisms of the food chain.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
................................................................................................................................................[3]
(b) PCBs are toxic to many organisms because they bind to a protein molecule known as AHR.

The Atlantic tomcod, *Microgadus tomcod*, is a fish that lives in the Hudson River and other rivers nearby.

90% of the tomcod population in the Hudson River is resistant to the effects of PCBs. This is because these fish have a different type of AHR compared with other tomcod populations.

(i) Suggest how this resistance came about.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................[5]

(ii) Scientists predict that the proportion of fish resistant to PCBs will decrease if the concentration of PCBs in the river decreases.

Suggest reasons why the proportion of fish with the altered AHR protein might decrease.
